Dear Customer,

PFAS

The Alumeco Group thank you for your enquiry concerning PFAS in our supplied products:

What is PFAS?

- Per- and polyfluoroalkyl substances (PFAS) are a large, complex group of synthetic chemicals that have been used in consumer products around the world since about the 1950s. They are ingredients in various everyday products.
- The per-and polyfluoroalkyl substances (PFAS) are a group of chemicals used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Fluoropolymer coatings can be in a variety of products, most well-known might be Teflon coatings on kitchenware.

As we mainly are selling basic metal products, and as our products are typically sold without any of these types of PFAS coating, then we safely can say that our products do not contain PFAS.

The declaration does not cover future surface treatments nor products, where the client themselves specify PFAS coatings.

Please do not hesitate to contact us, if you need any additional clarification regarding this PFAS declaration from our site.

Med venlig hilsen / Kind Regards / Mit freundlichen Grüßen
